WARMLY RECOMMENDED

Good blood circulation.

Cold hands or feet, heavy legs, low energy,
... Poor blood circulation can manifest
itself in various ways and many will
experience it sooner or later.

Blood circulation is how nutrients and oxygen are brought to your body's organs.

The better your circulation, the more good substances your body receives. However, poor circulation slows down or blocks blood flow, so the cells in your body do not get all the oxygen and nutrients they need.

We have just mentioned energy dips and often feeling cold, but it can also result

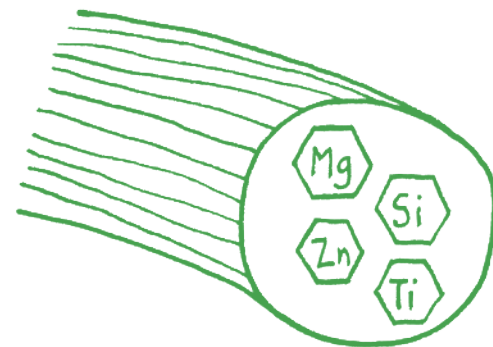

in concentration problems, tingling in your arms and legs, shortness of breath, varicose veins, chronic pain and more.

Fortunately, *Restore* comes to the rescue! A mattress fabric, based on bioceramic yarn, that will help rev up your blood circulation while you're sleeping. While sleeping? Yes, you've read it right!

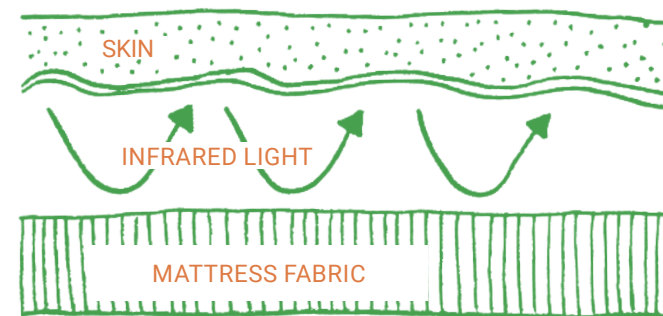

How does it work?

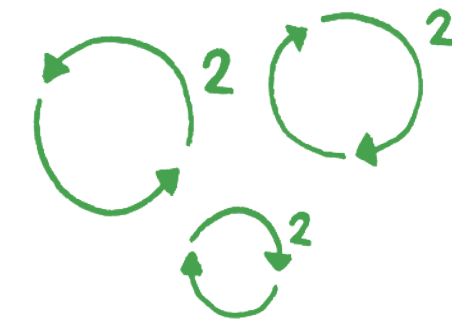

Restore is a Bio-Ceramic based mattress fabric with the unique ability to recycle your body heat and turn it into beneficial infrared energy (FIR).

1 — BIO CERAMIC YARN is created by mixing a selection of **MINERAL OXIDES** in a powdered form. This cocktail of science is transformed into a liquid state which can be fused onto polyester fibers and permanently embedded into yarn.

2 — The yarn obtained has the unique ability to **ABSORB BODY HEAT, TURN IT INTO INFRARED LIGHT** (IR) and send it back to the body where it is absorbed by the body tissue and muscles.

3 — These IR waves, re-emitted by the unique mineral structure of **RESTORE**, are beneficial as they penetrate deep into our tissue and cause the body to **INCREASE CIRCULATION AND OXYGEN** wherever it is applied.

A multitude of benefits

Thanks to the unique properties of FIR technology, Restore has the ability to improve local blood flow. Therefore, it contributes to a wide array of proven health benefits, including:

- ✓ Better metabolism
- ✓ Faster recovery
- ✓ Less cold hands and feet
- ✓ Reduces pain
- ✓ Improved sleep quality
- ✓ Feel more energetic

The healing properties of FIR

- Far infrared radiation (FIR) is known to offer a wide array of **THERAPEUTIC BENEFITS**.
- Scientific research have shown that FIR rays **ENHANCES BLOOD CIRCULATION**. Its thermal effect causes widening of our blood vessels (vasodilation) and therefore **INCREASES THE OXYGEN AND NUTRIENT** delivery levels in the blood and a faster removal of waste products.
- This exerts an anti-inflammatory effect, **REDUCES PAIN**, speeds up recovery after physical exertion and **PROMOTES A BETTER SLEEP**.
