Tape, Woven and Knit Ticking

Discover our new Collections

The Brera Collection pays homage to the 1970s Italian design sensibility, offering a fusion of vibrant hues and captivating patterns that defined the era. With a nod to the exuberant spirit of Milan's Brera District, known for its artistry and creativity, these fabrics invite you to embark on a journey through an era that celebrates both flair and sophistication.

CAFÈ

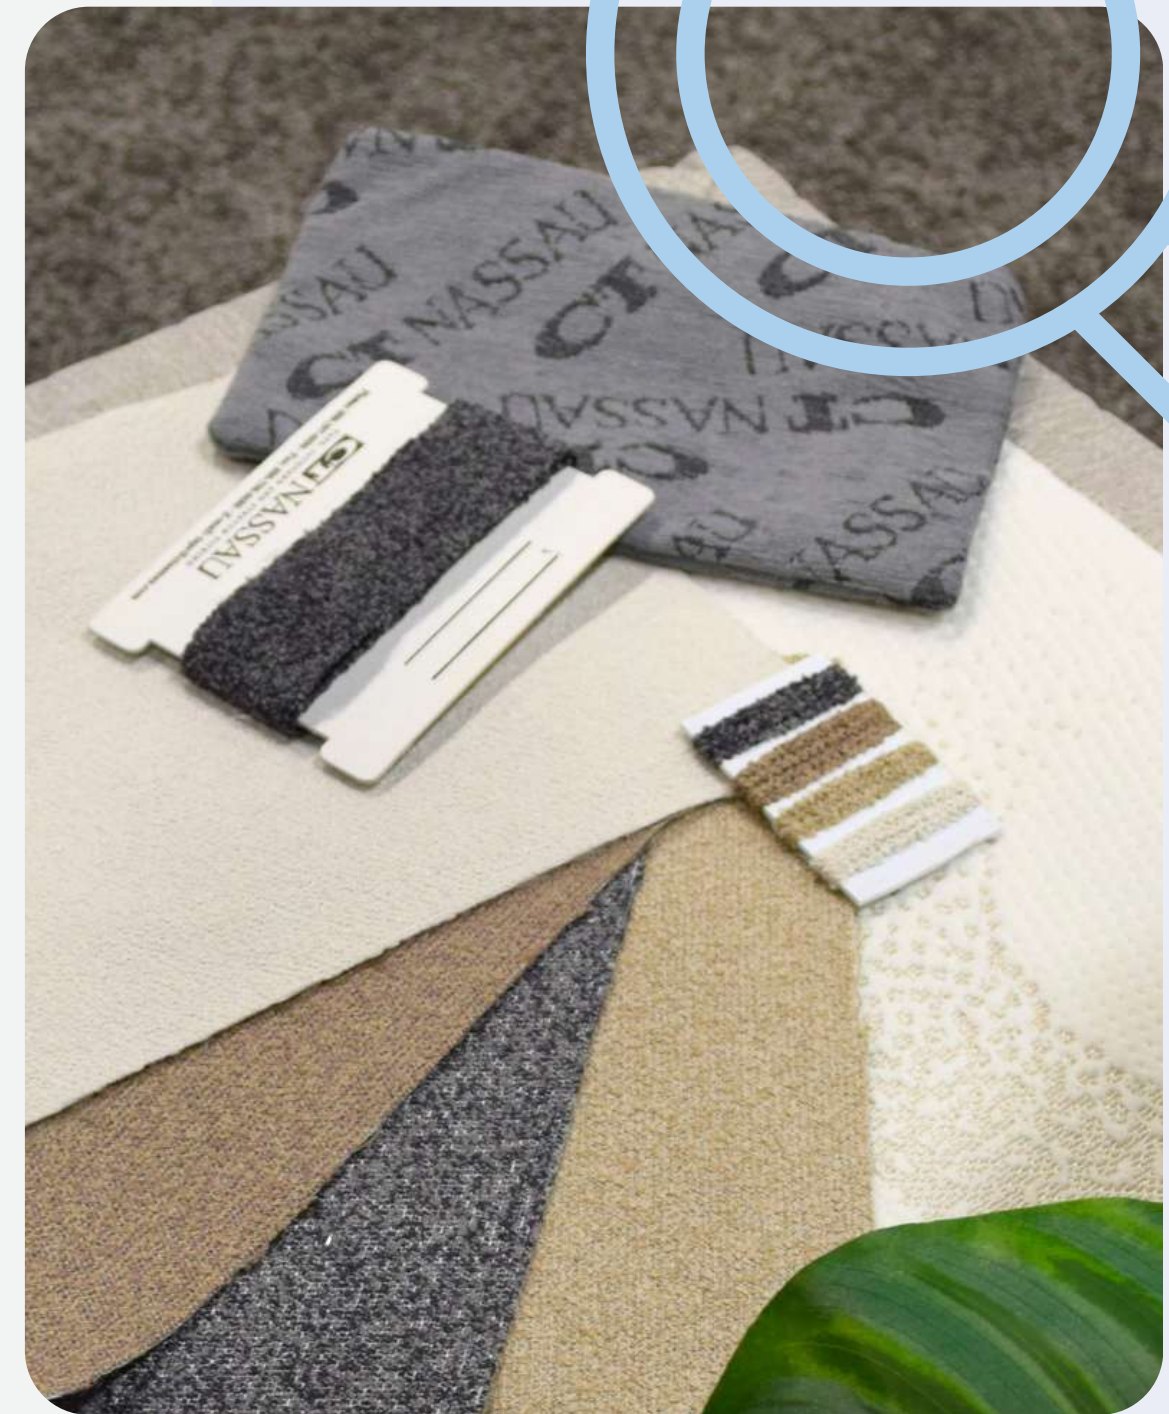

A focus on Chenille

MATTRESS TAPES & BORDERS

Discover Chenille Tapes and Borders, a game-changer in the field of mattress design. With comfort becoming increasingly important in the bedding sector, this luxuriously soft material provides a rich, handcrafted look capable of making anyone feel at home.

The plush texture of chenille adds a layer of softness to any mattress, creating an inviting haven for relaxation. Pictured here in dark grey and beige tones, the products are available in an array of versatile neutral colours.

Whether you're aiming for a sleek and contemporary aesthetic or a cosy and inviting vibe, CT Nassau's chenille tapes and borders offer endless possibilities for styling.

CT NASSAU launches for the first time in the U.S. Flame Retardant natural fabrics

SUCCESSFULLY PASSING 16 CFR 1633-2020, STANDARD FOR THE FLAMMABILITY (OPEN FLAME)

We've introduced a new solution enabling natural fibers to be fire-resistant without any added chemicals. The technology applied to the fabric does not change any properties of the fabric: appearance and touch remains unchanged. The substance on the fabric is biodegradable, hypoallergenic, and provides a soft, comfortable feel while being completely non-combustible. While on fire, it neither burns, drips, nor releases harmful gases like dioxin - and exhibits resilience even in extreme temperatures. The solution can be applied to any natural fabric. CT Nassau's Flame Retardant natural fabrics also meet GOTS certification standards.

GOTS

CERTIFIED FABRICS

GOTS is the worldwide leading textile processing standard for organic fibres, including ecological and social criteria, backed up by independent certification of the entire textile supply chain. Having one common standard means textile processors and manufacturers can export their fabrics and garments with one organic certification that is accepted in all major markets.

COOLING FABRICS

“ZEN” REFRESHING TOUCH

ZEN is a polyethylene-based yarn that provides superior cooling thanks to modifications in the fiber’s molecular structure. These ensure better thermal conductivity so that excess body heat is dissipated faster.

That’s catching two birds with one stone: while ZEN ensures a better sleep quality, it also helps us to save on energy!

100% MADE IN USA: These fabrics are made with a cooling yarn produced in-house.

RE-USE

MESSAGE IN A BOTTLE

Typically, plastic bottles are made from PET, which is a highly recyclable material. Polyester yarn is one of its promising new applications and we are excited to put it into use with our Re-Use fabric.

More than just finding a new life for waste, it is the way it is produced and how it can be reused that makes Re-Use so unique: the production process of the fiber reduces soil contamination, air and water pollution; Saves natural resources and energy; Is endlessly recyclable.
